Wieser's Onsite Seminars Continue to Grow

The 2009 Onsite Wastewater Seminars sponsored by **Wieser Concrete Products, Inc.** provided continuing education credits for over **900** onsite professionals at six different locations during the month of March.

Onsite professionals who attended one of these events had an opportunity to meet their continuing education requirements in one day with presentations by various speakers, small group break-out sessions and vendor exhibits all designed to provide the most up-to-date industry information possible.

At the Fond du Lac, Portage and Maiden Rock events, participants had an opportunity to tour our production facilities. During this tour, participants were able to see how Wieser precast tanks are produced and what is required for tanks to meet the states code requirements.

New this year to our seminar event locations was our seminar in the Milwaukee area. We had about 100 attend this first-time event and we received very positive feedback. The event agenda's shared many

of the same topics with different presenters sharing their expertise with the seminar goers. Presentation topics included: Code and Commerce Updates, Drip Dispersal Installation and Design, New Filter Technologies, Trench Safety and Powered Industrial Vehicles, Aerobic System Technologies and Tank Installation.

Vendor displays offered seminar attendees an opportunity to ask questions and learn about new products and applications.

Of course, no **Wieser Onsite Training Seminar** would be complete without the outstanding meal served by Andy Wieser and his staff! The now famous pulled-pork and turkey sandwiches along with potato salad, baked beans, chips and cheese curds make this a highlight at midday!

For those who attended this year's events, thank you and we hope to see you again next year. For those who have not joined this event before, please plan to join us in 2010.

Above, Andy Wieser conducts a tour through the Maiden Rock facility.

LondonBoulder™ was a perfect match for Resource Engineering Associates of Middleton, Wisconsin when they needed a retaining wall solution for their new office facility.

The LondonBoulder™ retaining wall allowed Resource Engineering to maximize their space. This premier cut-stone retaining wall enabled the contractor to raise the elevation so expanded parking would be available adjacent to the new office building.

LondonBoulder™ combines the natural aesthetics of boulder walls with the proven strength and reliability of traditional segmental retaining wall units. At roughly 2,000 pounds each, the sheer mass of these units allow the installer to build a **9-foot high wall with limited excavation and no reinforcements.**

LondonBoulder™ is a cut-stone retaining wall block that:

- Is easy to install with limited excavation required.
- Has reversible interlocking blocks that can be dyed to match any color
- Can be used as a partition wall with the chiseled rock texture on both sides.
- As a retaining wall, can either have a set back or a zero set back.

LondonBoulder™ is just one of several retaining wall options available from **Wieser Concrete.**

Contact your nearest **Wieser Concrete** location for your best retaining wall solution. You will experience the same dedication to innovation, quality and service that **Wieser Concrete Products, Inc.** has provided since 1965
